

Duration of the assignment – 3 days

Create a public repository in GitHub and send the link to : contact@cyberelysium.com

****Please make sure you follow the below-mentioned guidelines and design patterns to complete your assignment (InertiaJs and Facade Design pattern) otherwise, your application will be rejected in the evaluation process. ****

You should refer [CyberElysium YouTube channel](#) to get all the resources.

Full Stack Developer Internship - Assignment

Initiate a Laravel version 10 project (you will be rejected if any older versions used)

You should use Facade design pattern for the development process along with the InertiaJs technology.

[Inertia.js - The Modern Monolith \(inertiajs.com\)](https://inertiajs.com/)

Implement a login feature using Breeze authentication (you can use bootstrap)

[Starter Kits - Laravel - The PHP Framework For Web Artisans](#)

After successfully login to the system, the user should be redirected to the Dashboard.

Then, implement a CRUD for an entity called “Student”

- User can add new students,

- View added students,

- Edit/Modify existing students,

- Delete students.

Student should contain following attributes:

- id

- name

- image

- age

- status

User can change the “status” of the student to “active” or “inactive”.

You can use the following resources for your knowledge.
